BRIDGELINK

Harness your data, power your decision-making

MARLINK
ABOVE AND BEYOND

Centralise and maximise the value of all your onboard data with one easy-to-adopt solution

The maritime digital transformation is gathering pace. Yet vessels continue to operate without taking advantage of the valuable data collected by an array of fragmented, proprietary systems on board.

Brought together and used well, this data has the power to transform vessel operations and future-proof your fleet.

With BridgeLink, our end-to-end solution, we centralise and harness all relevant onboard data in one place to help you achieve the safer, more efficient and sustainable vessel operations the future demands.

Designed specifically for the maritime environment

Optimised for current and future maritime needs and challenges.

Easy to adopt, whatever your legacy systems

Completely compatible with all your operating systems onboard, regardless of provider.

Centralise all data in one place

Unifies and transmits a vast array of data types relating to nautical safety, scheduling and navigation, operations, maintenance and compliance.

Unrivalled data security

Your data remains always secured and protected thanks to best-in-class encryption and VPN technology.

Makes your data accessible and useful

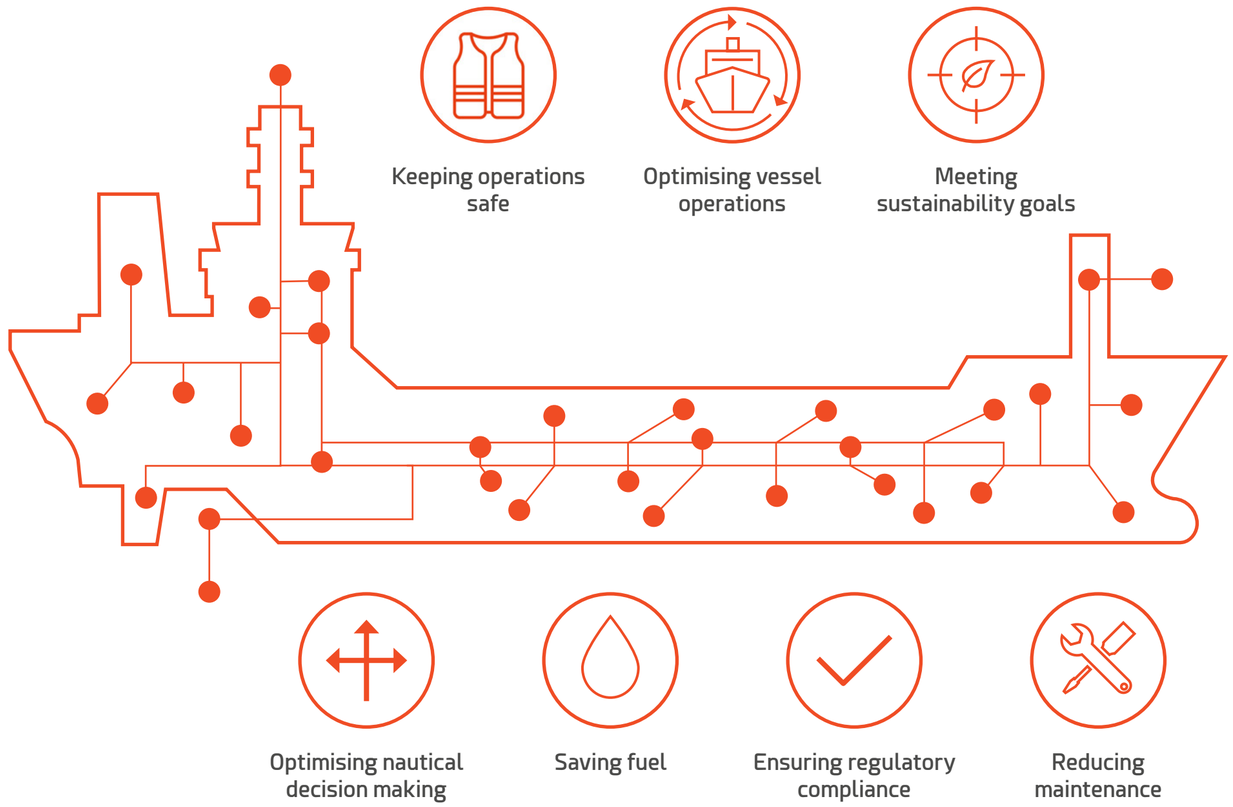

Transmits and displays data in real time via a user-friendly portal on board and ashore.

An open solution to share your data

Your data remains yours, not ours. Decide who can access your data and share it with your preferred 3rd-party suppliers.

A transformative impact, whatever your operational focus

How BridgeLink supports:

CEO and Decision Makers

Transforms fleet efficiency by maximising the value of data across every vessel, to help future-proof fleet operations for an even more competitive business, supported by Marlink's expertise.

COO and Commercial Operations

Creates and deploys value from fragmented data to maximise your commercial performance, enable data-driven decisions to comply with your charter plans and increase the satisfaction of your customers.

CIO and IT Managers

Integrates with all existing vessel systems to simplify your IoT, reduce the impact on vessel connectivity and centralise your data management, keeping the data in your hands.

Fleet Directors and Technical Managers

Enables your digital journey with a single solution harnessing all your onboard data to monitor and optimise your assets' health and operations, take fleet efficiency to the next level and support safety and compliance.

HSEQ Managers

Monitors critical information to comply with latest regulations, support your sustainability and improve customer and crew satisfaction.

Your BridgeLink, built around you

At Marlink we'll use our unrivalled expertise to customise BridgeLink so that it adds maximum value to your critical operations and efficiency – so you can operate your vessels in smarter, more profitable and more sustainable ways.
